Quality Assurance Engineer | Capital One | New York, NY

Jun 2024 - Dec 2024

- Performed integration testing in a micro frontend architecture using the Vue.js testing library and internal tools, ensuring seamless front-end functionality and an optimal user experience for Capital One agents using the Empath application.
- Executed thorough testing across high-priority credit card types (Primary Consumer, CreditWise, Small Business) to validate complex workflows involving account managers and authorized users, ensuring accuracy across all user interactions.
- Enhanced test coverage for the "Update Citizenship" workflow across various account types, achieving a 73.51% increase in function coverage and a 14.46% increase in statement and line coverage.

Business System Analyst | TD Bank | New York, NY

Nov 2022 - Nov 2023

- Collaborated with Product Owners, Scrum Masters, and Stakeholders during Agile ceremonies (Sprint Planning, Daily Standups, Sprint Reviews, and Retrospectives), facilitating team collaboration.
- Owned product backlog refinement and maintenance in Jira, prioritizing features and defining user stories with clear acceptance criteria. These efforts increased team efficiency by 20% and provided a well-defined roadmap for development.
- Developed logical data models for a skill matrix using PowerBI, incorporating key software engineering metrics like velocity, cycle time, and lead time. Analyzed trends in high-demand technologies, driving informed decision-making.
- Conducted thorough needs assessments by closely collaborating with stakeholders, interviewing software engineers and their leads. Used this data to align upskilling initiatives with organizational goals, enhancing strategic planning and resource allocation.
- Collaborated with and supported Cre8tive Devs, a third-party technical training vendor, to develop and implement an internal upskilling program.
- Supported the upskilling of 200+ software engineers, from associate to senior levels, by creating documentation and assisting with WSL and Docker setup. This initiative, spanning 10 cohorts over 5 months, covered Advanced Java, Spring Boot, Docker, Event-Driven Architecture, and Reactive Programming.

Full-Stack Engineer | TracFlo | New York, NY

Jun 2022 - Sept 2022

- As part of Tracflo's product launch, I developed 13+ features over 16 weeks using a PERN stack within a Linux environment. These features allowed 50+ general contractors and subcontracting companies to manage projects with up to 35+ active users with varying roles and permissions.
- My work included creating a ticket feature that enabled users to create, edit, and access equipment and materials, resulting in an average of 135+ tickets per company project. I managed feature branches, submitted draft PRs, and maintained coding standards while handling merge conflicts.
- Using the Knex.js library, I constructed 30+ migration files to migrate data from older PHP WordPress applications to the new Express.js server running TracFlo's API. This allowed a team of 9+ developers to create new endpoints and routes on the server, 10% ahead of schedule.
- To ensure optimal functionality and minimize potential bugs, I employed TDD (Test Driven Development) by creating 25+ tests using the Chai and Mocha test suite. I meticulously debugged HTTP requests on various routes and extensively tested PostgreSQL database functionality using mock data generated by SQL Fixtures and shell scripts.

Skills

- **Frameworks** - Bootstrap, Express.js, Vue.js
- **Languages** - Typescript, Java, Python, SQL
- **Libraries** - React, Redux, Material UI
- **Tools & Technologies** - Docker, WSL, AWS, Obsidian, Confluence, Jira

CUNY Tech Prep - Full-Stack Engineer Apprenticeship

New York City College of Technology - Bachelor's Degree in Computer Information Systems
